

ALMATY, KAZAKHSTAN June 7, 2008

Gentech Announces Completion of Seismic Program

Gentech International Kazakhstan LLP, announced today the completion of an 836 kilometer 2D seismic program over Block XXXI-36 located in Kyzylorda Oblast, South Central Kazakhstan. The survey covered the entire block and is targeted to map subsurface structures that might contain commercial oil and gas accumulations. Gentech has targeted drilling up to three of the prospects identified by this seismic survey in 2009.

The seismic was acquired by Azimut Exploration Services, JSC (“AES”), a Kazakh geophysical contractor based in Almaty. “The crew performed in very professional manner and the job was completed on budget and without any accidents or HSE problems. In addition, the rapid turnaround time using the field based processing capability provided by AES afforded our geophysicist the opportunity to optimize the placement of the seismic grid in real time with the seismic crew” stated Mr. Ian Vincent, Gentech seismic field Q.C. representative.

“We are pleased with the results of the seismic survey. This is an area of Kazakhstan that has not been subjected to the acquisition of seismic data in the past and it is exciting to see geological features that no one has ever seen before. We have been subjecting the data to advanced data processing techniques and are pleased to announce excellent final data quality for interpretation and mapping”, commented Richard Boyce, Gentech exploration advisor.

Block 36 lies on the Zhosaly Arch and is approximately 50 kilometers southwest of the southern margin of the prolific South Turgay basin. The block comprises an area of 1,313 sq. kilometers (324,460 acres or 500 sq. miles) and is considered a wildcat exploration venture. No deep wells have been drilled within the block however oil and gas shows are reported in shallow wells drilled by a regional Russian geological mapping expedition during the 1960’s.

Gentech International Kazakhstan, LLP is the Operator of Block 36 and is planning a drilling program guided by recent seismic surveys and the geochemical survey during 2009.

This press release includes certain “forward-looking statements”. The forward-looking statements reflect the beliefs, expectations, objectives, and goals of Gentech International Kazakhstan, LLP management with respect to future events and financial performance. They are based on assumptions and estimates, which are believed reasonable at the time such statements are made. However, actual results could differ materially from anticipated results. Important factors that may impact actual results include, but are not limited to exploratory drilling success resulting in the discovery of commercial quantities of hydrocarbons, commodity prices, political developments, legal decisions, market and economic conditions, industry competition, the weather, changes in financial markets and changing legislation and regulations. The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions as provided in securities regulated markets around the world.
